

Open handset alliance

by Delaire Jonathan

Plan

- Description
- Alliance overview
- Android
- Developers

All informations for this presentation are from <http://www.openhandsetalliance.com> .

Description

- 1.5 billions TV, 1 billions Internet users but 3 billions mobile phone users.
- Common goal.
- Offer customers a richer, less expensive, and better mobile experience.
- Commercial deployment the second half 2008.

Alliance overview

- The Alliance will regroup companies from those activity fields:
 - Mobile Operators
 - Semiconductor Companies
 - Handset Manufacturers
 - Software Companies
 - Commercialization Companies

Alliance overview

Alliance overview

China Mobile

Sprint Nextel

T-Mobile

Telefonica

Mobile Operators

Alliance overview

Alliance overview

Intel Corporation

NVIDIA Corporation

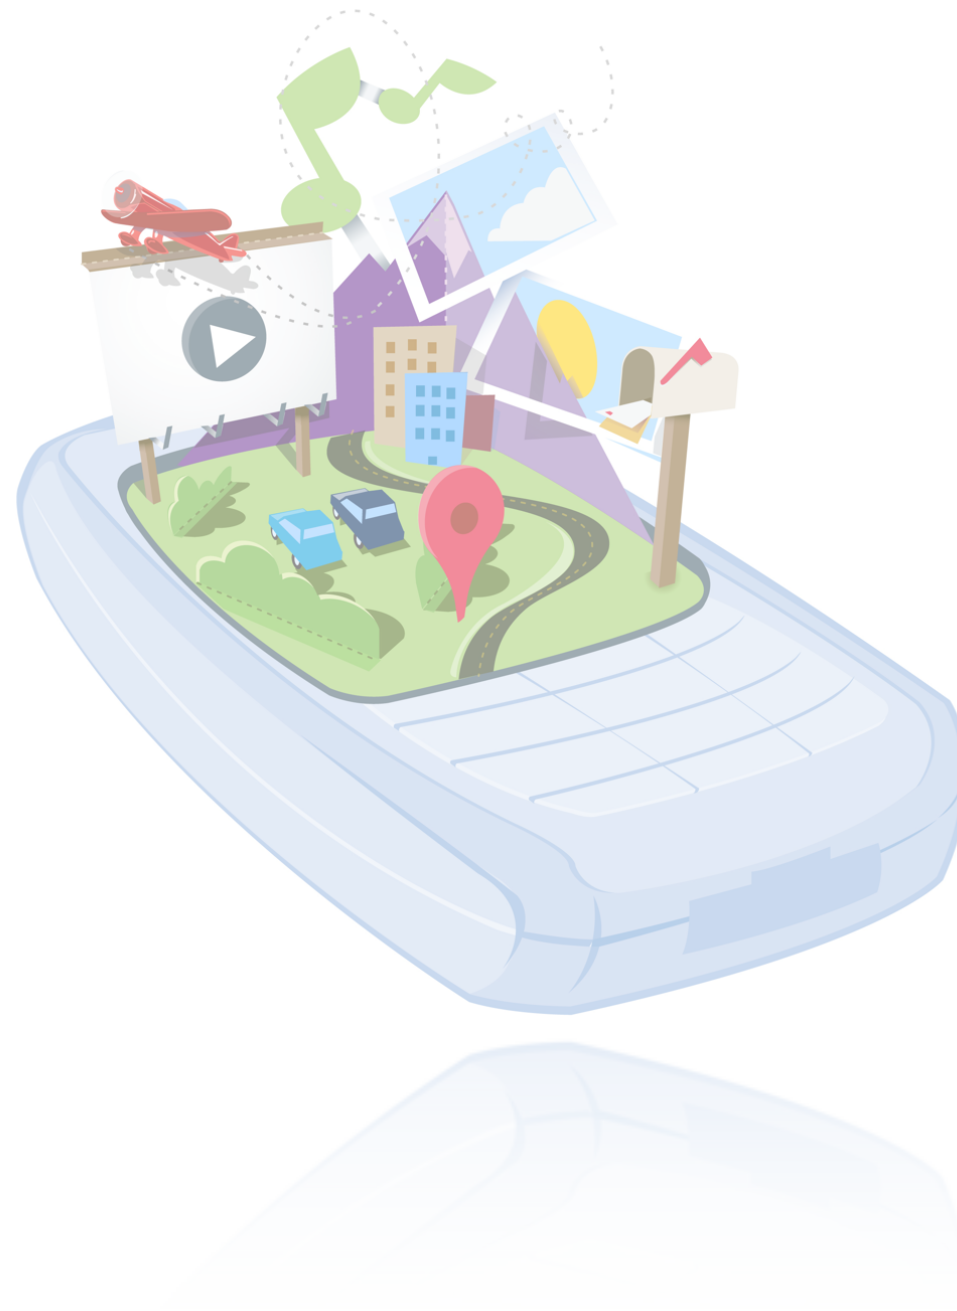

Marvell Semiconductor, Inc.

Texas Instruments

Semiconductor Companies

Google, Inc.

eBay, Inc. Nextel

Esmertec

Livingimage LTD.

Software Companies

Android

Android

Open.

All applications are equal.

Breaking down boundaries.

Fast & easy development.

What is Android?

- A software stack for mobile devices.
- Includes an operating system, middleware and key applications.
- Use the Java programming language.

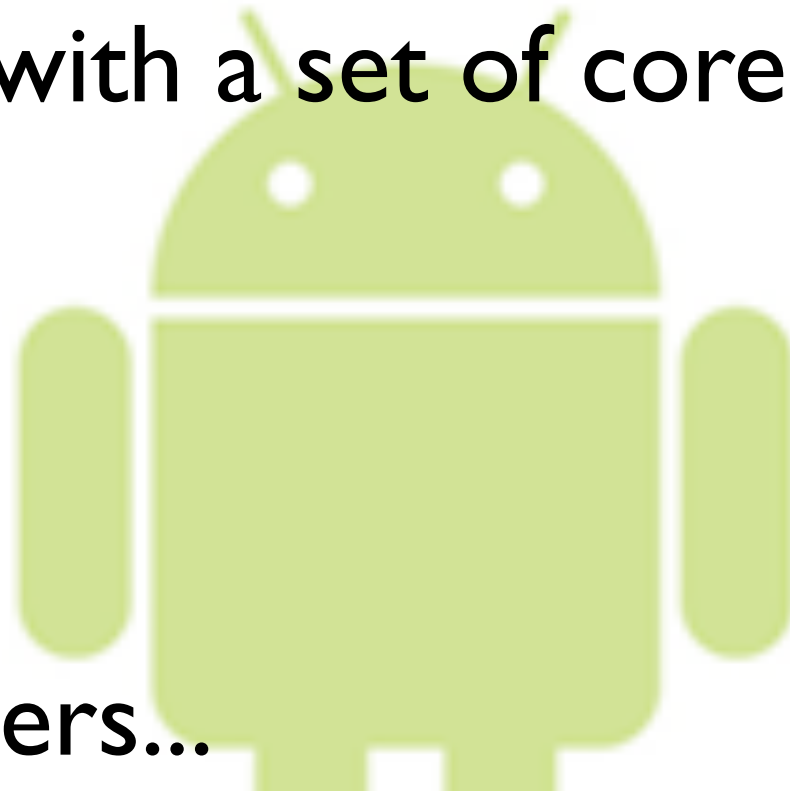

Android Architecture

Applications

Android will ship with a set of core applications like :

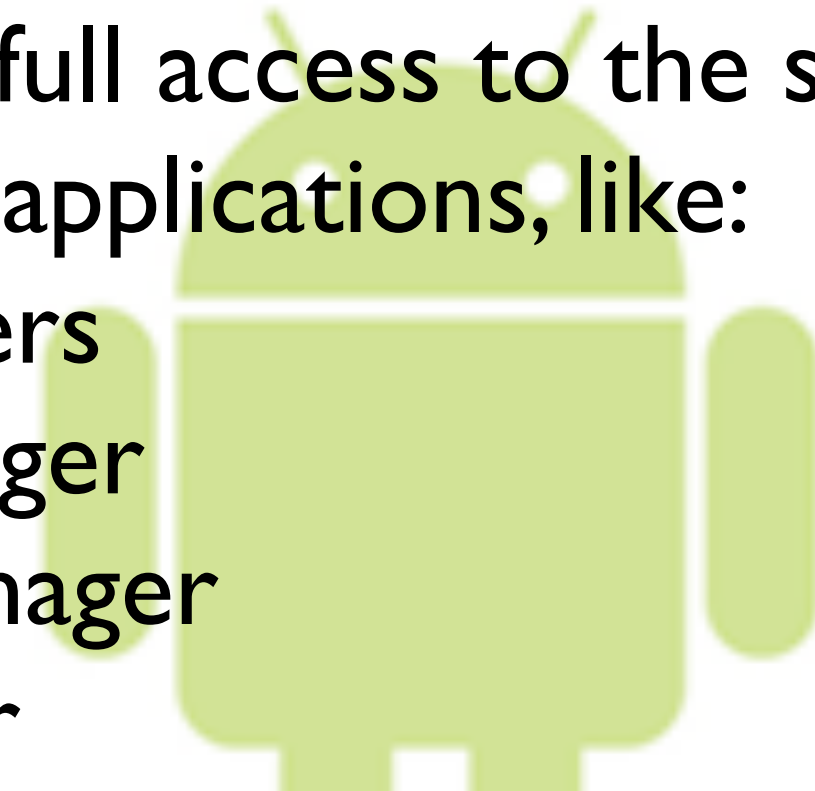

- Email client
- SMS program
- Calendar
- Maps
- Browser and others...

Applications framework

Developers have full access to the same framework APIs used by the core applications, like:

- Content Providers
- Resource Manager
- Notification Manager
- Activity Manager

Libraries

Android includes a set of C/C++ libraries used by various components of the Android system.

Android Runtime

- Every Android applications runs in it's process.
- The Dalvik VM is a Java VM optimized for minimal memory footprint.
- Dalvik VM relies on the Linux kernel for low-level management.

Linux Kernel

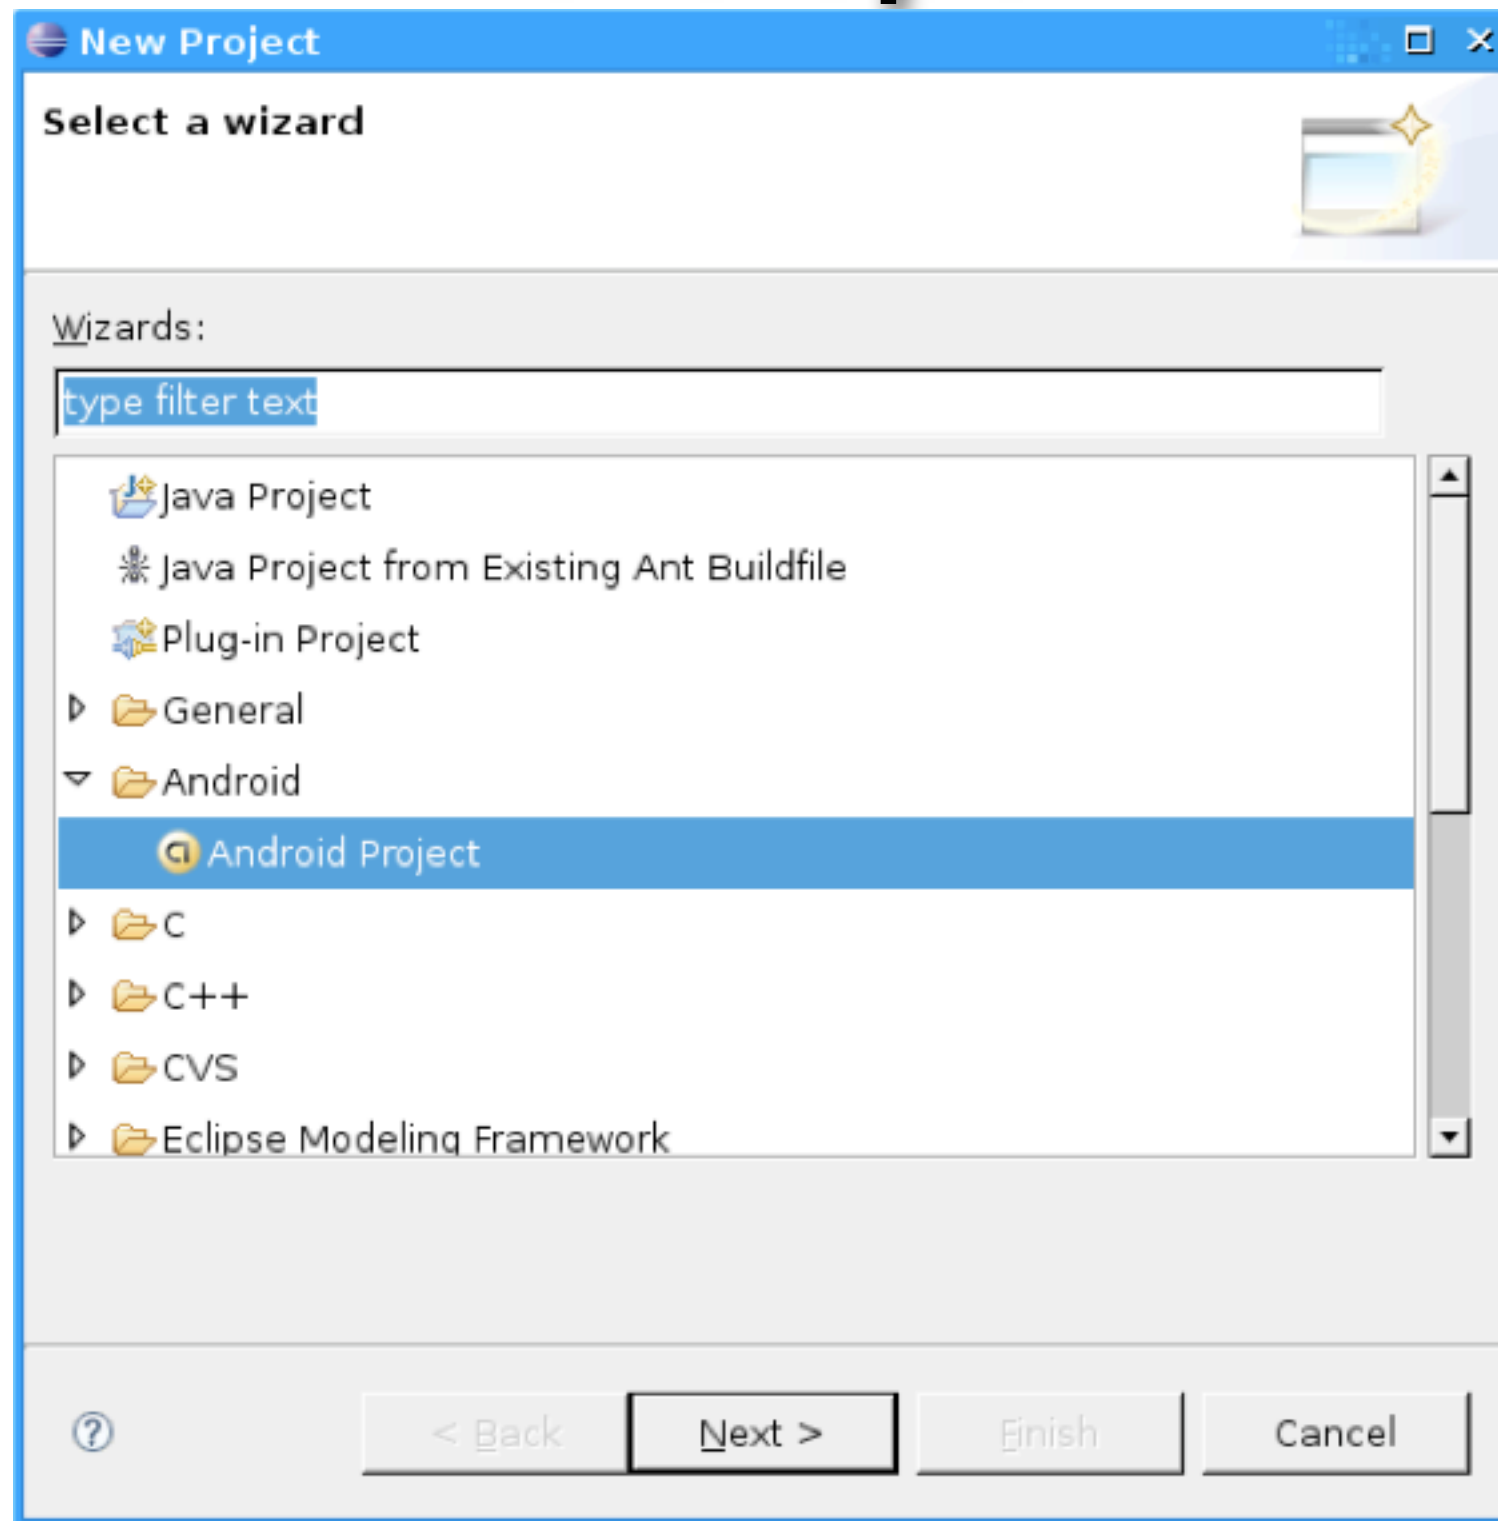

- Android relies on Linux version 2.6

Developer

- There is now a SDK available for Android.
- There is a Eclipse Plugin available too.
- All these are available from <http://code.google.com/android/> .

Developer

New Android Project

Creates a new Android Project resource.

Project name:

Contents

- ☒ Create new project in workspace
- ☐ Create project from existing source
- ☒ Use default location

Location:

Properties

Package name:

Activity name:

Application name:

The famous 'Hello World' tutorial

Developer

```
public class HelloAndroid extends Activity
{
    /** Called when the activity is first created. */
    @Override
    public void onCreate(Bundle icle)
    {
        super.onCreate(icle);
        setContentView(R.layout.main);
    }
}
```

The famous 'Hello World' tutorial

Developer

```
public class HelloAndroid extends Activity {  
    /** Called when the activity is first created. */  
    @Override  
    public void onCreate(Bundle savedInstanceState) {  
        super.onCreate(savedInstanceState);  
        TextView tv = new TextView(this);  
        tv.setText("Hello, Android");  
        setContentView(tv);  
    }  
}
```

The famous 'Hello World' tutorial

Developer

Here's how you construct a TextView:

```
TextView tv = new TextView(this);
```

Once we've constructed the TextView, we need to tell it what to display:

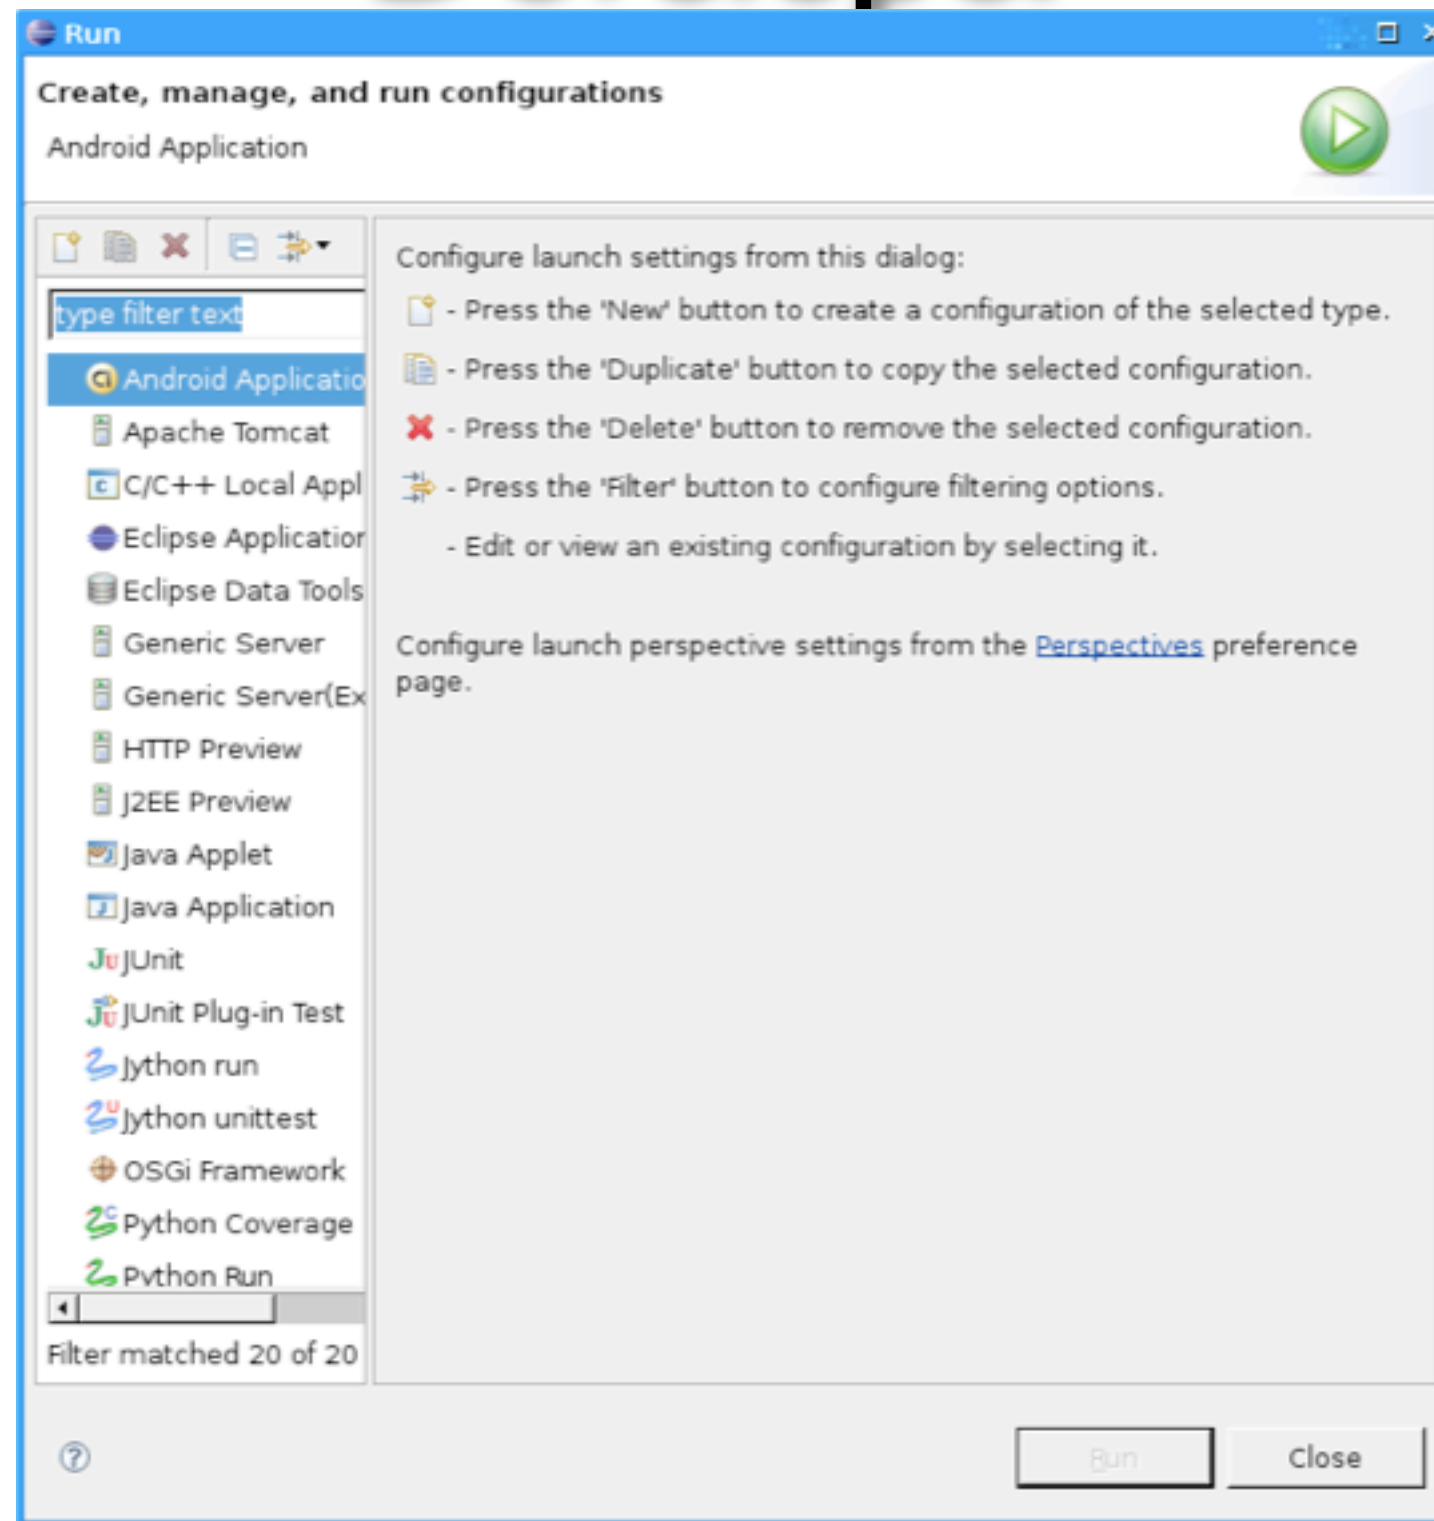

```
tv.setText("Hello, Android");
```

Now we need to tell the system to display it:

```
setContentView(tv);
```
